

CATALYST COMPOSITION, ITS PREPARATION AND USE

A B S T R A C T

5     An unsupported catalyst composition which comprises  
one or more Group VIb metals, one or more Group VIII  
metals, and a refractory oxide material which comprises  
50 wt% or more titania, on oxide basis, which is prepared  
by precipitation techniques, finds use in the  
hydroprocessing of hydrocarbonaceous feedstocks.
